Company Profile

2005

An Innovation

Leptone Interactive is a full media agency experiencing in the marketing and advertising industry for the past 6 years. The internet and world wide web and harnessing its powerful communication adequacies to provide propelled business attention and business growth to our costumers has been our primary focus of all other traditional marketing and advertising mediums. With an excellent team of professional designers and developers we provide total solutions for clients that need absolute presence on the web without dredging for popularity or attention through referrals and search engines. We make sure that you get the lot of visitors to your site through different methodologies.

Our team is proficient in latest cutting edge web technologies that enable us to create and furbish state of the art web applications that can pursue any type of operation required to perform a task or provide a visitor with adequate features. Although being able to create, customize and deliver hybrid web applications, we make sure that you're not only satisfied with the way how it works. Making sure that its front end and user interface is attractive and keeping visitors coming in and at the same time designers inspired of the designs and interactivity with the visual components is also our primary objective of a successful online system for your business.

We have been collaborating with online communities and other developers around the world and contributing to open source projects as a hobby and as a additional interest like no other in the country and that gives us a strong sense of security that our projects are trusted and used around the internet and hosted at other web sites providing mechanisms for harnessing user experiences for developing customized web applications.

Our rich portfolio can tell you that you're not only looking at a web designing and developing company. But a special entity that loves to bring about innovations through commitments to other designers and developers at the same time making sure that our clients know our activities through out a providing them with the guarantee that we will not only be present in the designing and development of a clients web system, but present in the development and growth of a clients business as a whole.

Leptone interactive is the owner of 4 open source projects out of which 2 are very successfully and well known. Both these projects provide developers with abilities to develop manageable, maintainable and portable web applications through out using the web's most powerful programming language. Gluing application workflow with user interactivity, authentication and authorization it is very easy to create web applications such as content management systems, photo galleries, product catalogues, web mail clients, dynamic web pages, cross site scripting engines and web service clients.

Being a great inspirer, Leptone Interactive has a team of professional designers capable of providing design services from traditional media such as brochures, leaflets, business cards, flyers to new media interactive web designs, animations to 3D modeling and video productions.

We pursue our best to proffer and carry out total business solutions for marketing and advertising our clients. Being a total solution provider we endure our last but not the least proficiencies to make sure that our clients gets more than what they expect. And being by their side as their business grows from small to medium to large is our vision.

Web Solutions

1 | Dynamic Web Applications

Developing dynamic web applications has been our primary focus for web based clients. Although some of our clients prefer their sites as traditional web sites for reasons, deploying a dynamic web application to drive customers to your website has a lot of advantages.

First of all, being able to customize the site content and features when ever you like is the far most beneficial advantage you will get over traditional ones. Personnel in charge of site maintenance do not require knowledge of HTML or other relevant technologies to update the website. An administrative control panel, which is something similar to a web mail interface, provides you with functionality just like a desktop application to customize site entities such as implemented pages, structure, news items, banners, modules, blocks and even customer user management.

Although the scale of the business might be small so does the necessity content it can provide to online visitors. But implementing a dynamic infrastructure and being able to scale in time when you need to is the key advantage of ownership of a website.

Traditional methods reduces you to higher a professional for the job which is costly. Or higher a professional each time you want to bring about changes to key information to web site is even costlier.

An example from our portfolio can be experienced from the website of Cartunes Pvt. Ltd. (http://www.cartunes.com.mv).

2 | Interactive Flash™ Driven

Modern designers and innovative and creative entities on the web present themselves and their services through Interactive Flash™ web sites. Flash ™ is the most powerful authoring enhancement ever seen on the Internet. It is a powerful technology that enables designers and developers to collaborate and build interactive multimedia web applications. Providing cutting edge vector graphics, and propelled vector animation features and functionalities, it can be used to deploy web applications that attach it self to site visitors and takes them afar that an online visitor is impelled to experience and explore each and every part of the website before they would even think of leaving.

It can combine 3D animations to event driven sound and music. User interactivity and speed of deliverance is so significant that visitors will experience a different environment just the same as the operating system their working on for example Windows XP™.

An example from our portfolio can be experienced from the website of Skytours Maldives Pvt. Ltd. (http://www.skytoursmaldives.com).

3 | Static Traditional Websites

Static traditional websites does not require an introduction. It has been the most widely used medium to deploy a presence on the web when larger entities realized that a need to automate and keep the control infrastructure on the website it self is more adequate. Either way small to medium enterprises still prefer static website as not much of a user experience is required in the initial years of its operation.

An example from our portfolio can be experience from the website of Panorama Maldives Pvt. Ltd. (http://www.artlinedesign.com).

Personnel

Inash Zubair
Project Coordinator
Web Developer | CTO
Leptone Interactive
Inash@leptone.com
7788904

Experience in major programming languages and specializing in software designing and development for the past 5 years; desktop programming and especially web programming has been a primary objective.

Designing of advanced content management systems and mission critical web applications ascertains that any kind of glue application can be developed for critical information systems.

Besides web designing, programming and development, desktop applications for Windows has been a secondary major scene. As integrating customized solutions for information systems that consist of large amounts of data and connectivity to relational database management systems, an uncertain customized solution is far from reality.

Hassan Shifaz
Project Coordinator
CEO | Project Manager | Layout Architect
Leptone Interactive
Shifaz@leptone.com
7778536

Shifaz has been experience the web industry for the past 4 years.
